**RFC/RAF Engine Repair Shops- France 1914 to 1918** Aug 09 2021 Some years ago, Aidan Williams published two articles for Cross and Cockade, the Journal of the First World War Aviation Historical Society. The subject of both articles was the relatively little-known Engine Repair Shops of the Royal Flying Corps (later the Royal Air Force) in France during the Great War. Aidan has updated the information, added background stories, and included more photographs and extra details to introduce the history of the Engine Repair Shops to a whole new readership. In 1915, Scarborough-born Second Lieutenant Louis Frederick Rudston Fell joined the Engine Repair Shops as Assistant Equipment Officer; by 1919, he was Lieutenant Colonel L. F. R. Fell DSO OBE, and he continued to play an important role in British aero engine development up to the Second World War. In addition, Air Mechanic Thomas Boland's working day in the rotary engine section is described.

**Pigboat 39** Jul 28 2020 " Constructed in 1923, the American submarine S39 was practically an antique when the Japanese struck Pearl Harbor. With defective torpedoes, a semi-trained crew, and a primitive ventilation system (hence the nickname), she nevertheless sank two enemy vessels and eluded pursuit to fight again in the Solomons. This is the little-known story of how an unprepared navy fought with what it had until the tide could be turned. Bobette Gugliotta was one of the S-39 wives. With the technical assistance of her husband, Guy, an officer who served on three of the S-class boats during the war, she presents an accurate and absorbing account of submarine operations and warfare. No less valuable is her candid and sympathetic portrayal of the men and women whose lives were caught up in the voyage of the S-39.

Vehicular Engine Design Feb 21 2020 The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable textbook exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines – both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.
